

# 5 Things To Do For **EVERY** Wood Floor Job

## Approve the product

Have your customer sign off on the floor and do your own inspection to look for damaged or defective pieces.

STEP  
01

MAKE SURE HOME IS BETWEEN 35-55% RH AND 60-80 DEGREES.

STEP  
02

## Acclimate the floor

Know manufacturer's recommended range for floor & subfloor. Use a professional moisture meter to test.

## Check the subfloor

A new floor won't fix a squeaky subfloor! Make sure it's clean, dry, flat and sound.

STEP  
03

CLEAN, DRY, FLAT, AND SOUND

DOUBLE CHECK THE MANUFACTURER'S INSTRUCTIONS

STEP  
04

## Use the right fasteners or glue and trowel

Try a glue assist method with nail-down floors to prevent squeaks.

## Get final signatures

Get final written approval from customer. Leave helpful info about maintaining the wood floor.

STEP  
05
